

## Care & Maintenance of IBS supplied EGGER Ergo Board

### EGGER ERGO BOARD

Created from oriented strand board (OSB), EGGER Ergo Board is a shiplap, tongue and groove profiled, internal ceiling and wall lining. It is for use with timber or steel framing.

Lightweight and easy to handle, it is a strong, dimensionally stable panel that resists warping and delamination. EGGER Ergo Board is marked with a nail grid to enable correct fixing. The tongue and groove joints provide high stiffness. Once installed it is not intended to be left in its raw state.

### FINISHING THE LINING

**EGGER Ergo Board** is required to be sealed or overlaid with an appropriate protective covering like paint or a membrane system compatible with a composite timber.

Where the panels are used in areas prone to water splash, a waterproof membrane or impervious covering must be used.

### MAINTENANCE

Under normal conditions EGGER Ergo Board requires no maintenance providing that the protective covering has been maintained. If water damage occurs to an area where EGGER Ergo Board has been used, ensure the area is allowed to dry before replacing any covering or coating.

Ongoing performance of EGGER Ergo Board relies on the maintenance of the protective coating/covering.
